## About us...

**Schepens Company** has been active in the concrete industry for four decades. Today we offer our customers a wide range of high-quality, self-developed mold release agents and treatment oils.

We have our own high-tech lab to guarantee a continuous high quality in the production of our release agents and treatment oils but also enables us to customize our products to the needs of our customers.

In the development of our products we are always looking for the best solutions, both in terms of safety, environment and consumption. Thanks to these efforts, the best result for our customers is always guaranteed.

This in combination with our customer approach made us to the European market leader concerning the mold release oil for the manufacturing of concrete roof tiles.

### ESCE Cover Calandula 10

During our many years of visiting concrete roof tile manufacturers we noticed a mold release agent isn't always the best solution for dealing with brand new molds.

With introducing brand new molds very often concrete was sticking to the pallets and depalleting became a nightmare.

With these problems and our company philosophy in the back of our mind we have developed a special environmentally friendly treatment oil for the protection of the new molds before a first time use.

ESCE Cover Calandula 10 is a ready-to-use biodegradable treatment oil free of VOC and based on vegetable oils and aromatic-free solvents.

Easy to apply and available in containers of 1000 liters or drums of 210 liters

#### Why should I use it?

ESCE Cover Calandula 10 is a treatment oil specially developed to prevent sticking of concrete on brand new molds when they are used for the first time.

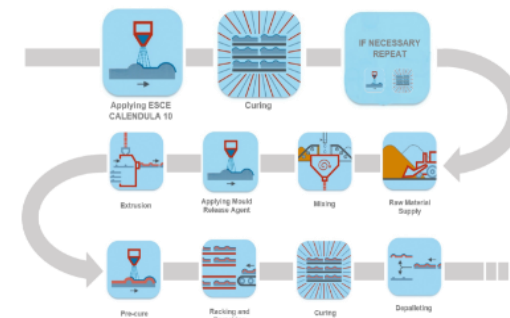

It can also be used after a thorough cleaning of the molds with for example sand- or ice blasting.

During first production runs ESCE Cover Calandula 10 will:

- Prevent sticking of concrete on the new molds
- Improve depalleting
- Expand the lifespan of the new molds
- Increase the protection of the molds
- Reduce the costs due to fall-outs and cleaning

#### How do I use it? (\*)

(\*)See technical data sheet for instructions for use

#### Physical Properties

- Density: 0,856 kg/l at 20°C
- State: Liquid
- Colour: Light brown
- Flash Point: 108°C
- Viscosity: 8–9,5 mPa\*s at 25°C
