SCHEPENS COMPANY

We at Schepens care about you!

ESCE DPD 140K

WWW.SCHEPENSCOMPANY.COM ◀

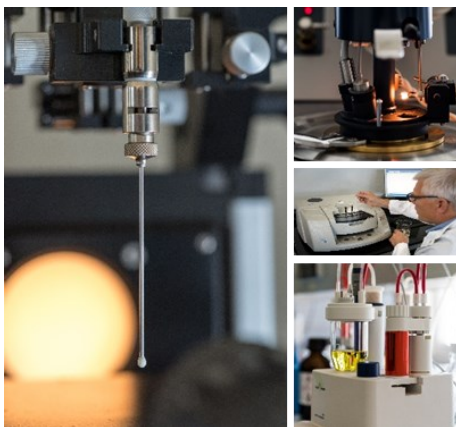

About us...

Schepens Company has been active in the concrete industry for four decades. Today we offer our customers a wide range of high-quality, self-developed mold release agents and treatment oils.

We have our own high-tech lab to guarantee a continuous high quality in the production of our release agents and treatment oils but also enables us to customize our products to the needs of our customers.

In the development of our products we are always looking for the best solutions, both in terms of safety, environment and consumption. Thanks to these efforts, the best result for our customers is always guaranteed.

This in combination with our customer approach made us to the European market leader concerning the mold release oil for the manufacturing of concrete roof tiles.

ESCE DPD 140K

A release agent specially developed for the concrete roof tile industry with less odor, free of VOC and with no aromatic solvents.

It became one of our most sold release agents all over Europe with references in almost every country.

Depending on the condition of the pallets we're able to adapt our standard formulation. This way we can help to find the perfect balance between costs, pallet condition and the amount of release agent to apply.

Finding the correct amount of oil to apply isn't only saving you money but also improves the quality of the finished product. The hydration process of the concrete will improve which results in a stronger and smoother finished product

Currently our customers are using an average between 1,7 and 3,5 gram a pallet.

Why should I use it?

ESCE DPD 140K is:

- A ready-to-use form release agent
- Based on a mixture of vegetable and mineral oils
- Readily biodegradable
- Free of aromatic solvents
- Free of VOC (EU)

"... We obtained a higher strenght and quality of our finished product..."

As the result of both chemical and physical effects ESCE DPD 140K forms a microfilm with an excellent adhesion to steel and aluminum surfaces. This microfilm ensures:

- Excellent separating abilities
- A higher protection of the pallets
- A nice and smoother concrete surface
- Minimal dust formation

How do I use it? (*)

ESCE DPD 140K is only suitable for the production of concrete roof tiles. Do NOT use on new molds! For new molds use the special developed treatment oil for first time use:

(*)See technical data sheet for instructions for use

Physical Properties

- Density: 0,856 kg/l at 20°C
- State: Liquid
- Colour: Light yellow
- Flash Point: >110 °C
- Viscosity: 10 mPa*s at 25°C
